VR QUEST™

Building Skills for life

VR QUEST™ is....

a learning process that integrates fully-immersive Virtual Reality technology into theclassroom. It's mission is to enrich students' lives by offering computer instruction in Virtual Reality game design and teach real-life skills using a constructivist project-based learning model. At the heart of **VR QUEST™** are students working as a team to create a Virtual Reality game. Students utilize the **VR QUEST™** curriculum, *The Game Creators©* software, hardware and educational process as an integral part of their learning experience. Each project has a particular content area chosen as the lead theme. A myriad of other content areas and disciplines are woven into the project to create a unique and challenging crosscurricular experience. To insure that students have a vested interest in the project at hand, we give them the responsibility for defining the challenge. This challenge then becomes the framework for students to design a cohesive and meaningful project in Virtual Reality. Students can then keep the games they've created for use on their home computer.

Students Learn...

valuable skills throughout the **VR QUEST™** process. They develop and strengthen knowledge in:

- Computer and Internet Literacy
- Problem Solving
- Critical Thinking & Creativity
- Teamwork
- 2D and 3D Game Design
- Research
