I have been a technology teacher at Marsh Avenue Expeditionary learning school for five years now. I have introduced many different programs to my students in an effort to engage their interests as well as prepare them for a world that continues to revolve around technology. When students were exposed to VR Quest the response was well received as you could expect. Finally, students can learn as well as be entertained! My beta class even requested that they have the opportunity to spend more time with the program in order to better negotiate its features.

VR Quest is an educational program that not only combines constructive thinking with gaming, it is also themed around positive results as opposed to most of today's other computer games. I would recommend this program to any school interested in expanding their technical horizons as well as increasing student engagement. I also recommend this program based on its ease of functionality, as well as the level of support Mr. Black provides.

Sincerely,

Anthony J. Ferrugio
